

RUI FILIPE MONTEIRO ALMEIDA

SENIOR SOFTWARE ENGINEER — KOTLIN & COMPOSE MULTIPLATFORM

Porto, Portugal

eyther.dev github.com/ruialmeida51 linkedin.com/in/ruialmeida51/

Profile

Senior Software Engineer with 7 years of **Android** experience, recently focused on **Kotlin Multiplatform** and **Compose Multiplatform**. Building cross-platform apps while mentoring graduates and guiding them in developing scalable, maintainable applications.

Experience

Mindera

Senior Mobile Developer - Kotlin and Compose Multiplatform

Kingfisher Group (B&Q and TradePoint)

2025 – Now

Developed two apps with a shared codebase where all domain and data layers are KMP and exported as a binary framework for iOS. The UI is native on both platforms, with Android using Compose Multiplatform and a Desktop target maintained as a proof of concept to build a multiplatform mindset. Owned all my features, collaborated closely with product and design, and participated in increasingly technical discussions with the team to guide the project's direction.

Senior Android Developer

YNAP Group (Net-A-Porter, Mr. Porter and The Outnet)

2024 – 2025

Worked on various applications for the YNAP Group. Collaborated directly with product and design teams and took full ownership of my features. Improved the CI/CD pipeline using GitHub Actions, addressing performance and stability issues. Introduced Jetpack Compose in production for modern UI development and used Jetpack Glance for widget creation.

Hole19

Android Developer

Hole19

2023 – 2024

Apart from day-to-day features, worked with the team to migrate the app from a legacy view-based/MVP architecture to a more modern and testable structure using MVVM, Coroutines, Flow, and Compose. Contributed to design decisions and implementation, and had the opportunity to work on Wear OS.

Mindera

Android Developer

Waitrose Groceries

2021 – 2023

Collaborated directly with the client and took full ownership of my features. Worked with the team on initiatives such as migrating XML layouts to Compose, introducing the Navigation Component, and moving from RxJava to Coroutines and Flow to keep the app modern and maintainable, contributing to its continuous modernization and keeping it state of the art. Migrated the CI/CD pipeline from a locally run Jenkins to Bitrise, improving build speeds and greatly reducing build failures.

Android Developer

Smartbox Beneficiary, Smartbox Partner

2019 – 2021

Worked as an Android developer, helping maintain the project. Collaborated directly with the client and integrated their team. Coordinated features with design and product teams. Grew significantly in this role, supported by a great team, building on the experience from my internship.

Intern Android Developer

Mindera People

Feb 2019 – Sep 2019

First experience with mobile development using Android. Built an internal tool from scratch to help employees manage their own information within the company - from scheduling vacations to updating profiles. Built a foundational understanding in mobile app architecture, reactive programming and agile delivery practices.

Projects

Loom App Open Source	Designed and built the entire Android application independently. Handled architecture, Compose UI, design, testing, feedback, and deployment. Currently converting the project to Kotlin and Compose Multiplatform to support iOS targets when time allows it.
Schola App Closed Source	Developing a complete Kotlin Multiplatform application from scratch, including design work. Owning all architecture decisions to ensure the app scales for multiple tenants, each with its own UI or context. In charge of maintenance, design, CI/CD and releases. Targeting Android, iOS and Desktop, with Web as a proof of concept.
KMP Mindset Open Source	Authoring open-source learning guides for Kotlin and Compose Multiplatform, built from material and examples created during my mentorships. Initially compiled from classes and guidance given to interns, now shared openly to help new developers bootstrap projects and learn best practices.

Mentorship

Mentored one intern through a full multiplatform app targeting Android, iOS and Desktop, using CLEAN architecture principles and MVVM patterns. The project was completed successfully.

Currently mentoring two Kotlin and Compose Multiplatform interns:

- Mobile-first app: continuing development of the project built in the previous internship, focusing on mobile first (Android and iOS), with Desktop as a proof of concept for further multiplatform compatibility. Architecture follows Clean principles and MVVM.

- Web plugin project: developing an addon for Google Hangouts using Compose Multiplatform targeting web, with a back-end integration within the project. Desktop target used as a proof of concept using the Hangouts API.

Education

Bachelor's Degree in Software Engineering

ISEP - Instituto Superior de Engenharia do Porto

Sep 2016 – Sep 2019

Languages

Portuguese (native), English (fluent), Spanish (intermediate)

Hobbies

🛠️ I enjoy tinkering, especially when you consider how many times I've disassembled my computers.

🎾 I'm working on my tennis, hopefully I won't do as bad in coding as I do in the court.

🎮 Retro Gaming is slowly growing on me, and I've already dusted off my PS1 and PS2. Despite all the regular gaming, of course.

🥷 Lately I've also been investing some of my time in open-source projects, trying to give back to the community.
